

artificial cavity inserts installed upon request of the Service. Two of the four inserts were active by March 1998, one of which was identified as the nest tree in May 1998. Harvesting the 80 acres will incidentally take at least two RCWs (and any offspring produced), three natural cavity trees, and four trees with artificial cavity inserts.

The applicant proposes to provide \$50,000 to implement the Misstex RWC HCP. The mitigative aspects of this HCP involve translocating juvenile RCWs from the 80 acres in Montgomery County to Champion International's Brushy Creek RCW Management Area in Trinity County, Texas, in an attempt to establish an additional breeding pair on a permanently protected 210-acre site. If an additional RCW group has not been established on the Brushy Creek RCW Management Area after four breeding seasons, Champion International agrees to assume responsibility for the mitigation of the group located on the applicant's property.

The permanent protection and management of 210 acres on Brushy Creek RCW Management Area is intended to compensate for the loss of 80 acres of RCW habitat on the applicant's property. The agreement by Champion to increase its baseline number of RCW groups by one, essentially results in relocating one breeding group instead of the loss of one group. The balance of the funds that remain after the applicant's mitigation is considered complete will be placed in an endowment fund to be managed by the National Fish and Wildlife Foundation for RCW recovery programs on state and private lands.
